Examine the gross anatomical features of skeletal muscle. Muscle = 100s-1000s of individual muscle cells
Skeletal muscle fibers
Blood vessels - deliver oxygen and glycogen
Nerve fibers - carry impulse for stimulation
Connective tissue Attachment - indirect or direct; tendons and aponeurosis
Epimysium = connective tissue around the entire muscle; dense irregular connective tissue
Fascicle = bundle of muscle cells, covered by the perimysium
Perimysium = connective tissue covering ...

~~Anatomy Muscle Study Guide Answers Zanara - - -~~

The structural unit of a muscle is the muscle fiber, while the functional unit is a motor unit. Skeletal muscles mostly act in antagonism, meaning that when one contracts to create the movement (agonist), the corresponding opposite one relaxes (antagonist). Muscles working as antagonistic pairs are responsible for creating a smooth movement.
