scientific inquiry was the result of many epidemiologic studies that have shown protective effects of plant-based diets on cardiovascular disease (CVD) and cancer.

## **Bioactive compounds in foods: their role in the prevention ...**

Antioxidant bioactives like flavonoids, carotenoids, and polyphenols are plant chemicals that protect your body's cells from damage caused by unstable atoms known as free radicals, which cause disease and illness. If your diet is lacking in foods that contain these compounds, you're going to be sick and gain weight.

## **Bioactive Foods: What they Are & Why You Need Them in Your ...**

Epidemiological studies indicate that high consumption of foods rich in bioactive compounds with antioxidant activity, including vitamins, phytochemicals, and mainly phenolic compounds, such as flavonoids and carotenoids, has a positive effect on human health and could diminish the risk of numerous diseases, such as cancer, heart disease, stroke, Alzheimer's, diabetes, cataracts, and age-related functional decadence (Hassimotto, Genovese, & Lajolo, 2009; Siriwardhana et al., 2013).

extremely important for medical students, food scientists, dietitians, and health care practitioners. It will enable them to discuss food choices for health maintenance and evaluate credible information about food and its role in health promotion, maintenance, and management of cancer.

## **Bioactive Compounds and Cancer - Functional Food**

Dear Colleagues, Bioactive compounds are non-nutritional components derived from vegetable foods and beverages. In the last decades, their consumption has been related to the prevention of multiple pathologies through several mechanisms that include the reduction of oxidative stress and the inhibition or enzymatic activation or the modulation in the expression of certain genes.
