Toma's clear and well-integrated review of the latest research, as well as his advice for decision makers applying the book's lessons in practice, ensures this volume's place in the growing literature on strategy and management in higher education.

This book offers an alternative to the traditional approach by focusing on building the change capacity of the entire organization in anticipation of future pressures to change. Based on systematic research of more than 5,000 respondents working within more than 200 organization or organizational units conducted during the previous decade, this book offers a clear and proven method for diagnosing your organizational change capacity. While building organizational change capacity is not fast or easy, it is essential for effective leadership and organizational survival in the 21st century.

Never before have strategic leaders been confronted with so much overwhelming change. The traditional approach taken by the leader or leaders is to direct or control the organization's reaction on a monthly, weekly, or even daily basis.

Robust organizational capacity is a company s potential to apply its skills and resources to accomplish goals and exceed stakeholders expectations. This book provides readers with the ability to diagnose both the drivers of change in their organization and the type of change response needed. In addition to the traditional tangible dimension of change, it presents a framework to leverage the cultural and personal dimensions of change to sustain successful change initiatives. As well, it presents an organizational capability self-assessment process to derive the maximum return on change efforts and investments. CEOs and executives will benefit from the ability to link demands for change to organizational capabilities in strategic initiatives.

Praise for Building Nonprofit Capacity "A central question for leadership is to identify where, and when, to focus organizational energy, and that is where Brothers and Sherman's book comes in. Changing organizations is never easy, which is why managers need the right set of maps and tools—like this one." Jon Pratt, executive director, Minnesota Council of Nonprofits "Anyone running a nonprofit organization, no matter how large or small, would benefit from reading this book. It's chock-full of useful information about managing change." Eric Nee, managing editor, Stanford Social Innovation Review "Nonprofit leaders need tools to help them manage better, engage communities, collaborate, and have greater impact. Building Nonprofit Capacity is a great tool and a useful reference for organizations that are seeking to make a greater and more sustainable difference." Paul Schmitz, CEO, Public Allies "Brothers and Sherman expertly braid together complementary organizational lifecycle frameworks—and add their own wide-ranging expertise and experience—to bring practitioners and executives this comprehensive, relevant, and honest book about the organizational quest to become ever better." Jeanne Bell, CEO, CompassPoint Nonprofit Services "Whether you are building a start-up, bringing an organization to scale, managing an established group toward excellence, or shepherding a nonprofit at risk of decline, this book should be required reading for every nonprofit executive director." Richard R. Buery, Jr., president and CEO, The Children's Aid Society "There are a lot of nonprofit management books out there. What makes Brothers and Sherman's book different and so important and worthwhile is that they have combined a number of models, theories, and practices and shaped them into a few essential processes that can be used by organizations both large and small." Doug Bauer, executive director, The Clark Foundation

Transform Your Organization by Scaling Leadership How do senior leaders, in their own words, describe the most effective leaders—the ones that get results, grow the business, enhance the culture and leave in their wake a trail of other really effective leaders? Conversely, how do senior leaders describe the kind of leader that undercuts the organization's capacity and capability to create its future? This book, based on groundbreaking research, shows how senior leaders describe and develop leadership that works, that does not, that scales, and that limits scale. Is your leadership built for scale as you advance in today's volatile, uncertain, dynamic, and disruptive business environment? This context puts a premium on a very particular kind of leadership—High-Creative leadership capable of rapidly growing the organization while simultaneously transforming it into more agile, innovative, adaptive and engaging workplace. The research presented in this book suggests that senior leaders can describe the High-Creative leadership with surprising clarity. They also describe with equal precision the High-Reactive leadership that cancels itself out and seriously limits scale. Which type of leader are you? You scale your leadership by increasing the multiple on your leadership in three ways. First, by developing the strengths that differentiate the most effective leaders from the strengths deployed by the most Reactive and ineffective leaders. And second, by increasing your leadership ratio—the ratio of most the effective strengths to the most damaging liabilities. Third, by developing High-Creative leaders all around you. Scaling Leadership provides a proven framework for magnifying agile and scalable leadership in your organization. Scalable leadership drives forward-momentum by multiplying high-achieving leaders at scale so that growth, productivity and innovation increase exponentially. Creative leaders multiply their strengths beyond technical competence by leading in deep relationship, with radical humanity, passion and integrity. Drawing upon decades of solid research and experience enhancing individual capability and collective leadership effectiveness with Fortune 500 companies and government agencies, the authors provide an innovative and efficient framework to help you: Take stock of your own personal balance of leadership strengths and weaknesses Scale your leadership in deep relationship and high integrity Proliferate high-achievers throughout your organization's leadership system Identify ineffective leadership and course-correct quickly Transform your organization by transforming leadership Scaling Leadership is an invaluable tool for executives, managers, and leaders in business, academia, nonprofit organizations, and more. This innovative resource provides effective techniques, real-world examples, and expert guidance for organizations seeking to improve performance, align and execute strategies, and transform their business with scalable leadership capability.

Among the issues confronting America is long-term care for frail, older persons and others with chronic conditions and functional limitations that limit their ability to care for themselves. Improving the Quality of Long-Term Care takes a comprehensive look at the quality of care and quality of life in long-term care, including nursing homes, home health agencies, residential care facilities, family members and a variety of others. This book describes the current state of long-term care, identifying problem areas and offering recommendations for federal and state policymakers. Who uses long-term care? How have the characteristics of this population changed over time? What paths do people follow in long term care? The committee provides the latest information on these and other key questions. This book explores strengths and limitations of available data and research literature especially for settings other than nursing homes, on methods to measure, oversee, and improve the quality of long-term care. The committee makes recommendations on setting and enforcing standards of care, strengthening the caregiving workforce, reimbursement issues, and expanding the knowledge base to guide organizational and individual caregivers in improving the quality of care.

The evaluating capacity development project: an experiment in evaluating capacity development; The basics of capacity, organizational ccapacity development, and evaluation; Why manages should be concerned with organizational capacity development and its evaluation; Towards a holistic approach to organizational cpacity development; Towards partnership in organizational capacity development; Approaches for evaluating organizational capacity development; Using and benefiting from a evaluation.

This book examines the relevant roles, skills and knowledge needed to build the institutional research capacity across the higher education sector globally. The information contained herein will inform IR practitioners, senior level institution officials, and higher education scholars. With a focus on building the capacity of the IR profession, this book's primary audiences include senior leaders who wish to introduce or strengthen their understanding for effective decision support and staff members who are currently in decision support units and those who wish to serve in this capacity. However, this book also offers detail on the decision support function to higher education scholars who seek to better address how data can inform policy and planning in higher education. Through a broad discussion about the roles and skills of the practitioners, this book will also enumerate the ways in which decision support practitioners can be valued contributors in shaping the future decisions and direction of specific institutions and higher education broadly.

This book focuses on a gap in current social work practice theory: community change. Much work in this area of macro practice, particularly around "grassroots" community organizing, has a somewhat dated feel to it, is highly ideological in orientation, or suffers from superficiality, particularly in the area of theory and practical application. Set against the context of an often narrowly constructed "clinical" emphasis on practice education, coupled with social work's own current rendering of "scientific management," community practice often takes second or third billing in many professional curricula despite its deep roots in the overall field of social welfare. Drawing on extensive case study data from three significant community-building initiatives, program data from numerous other community capacity-building efforts, key informant interviews, and an excellent literature review, Chaskin and his colleagues draw implications for crafting community change strategies as well as for creating and sustaining the organizational infrastructure necessary to support them. The authors bring to bear the perspectives of a variety of professional disciplines including sociology, urban planning, psychology, and social work. Building Community Capacity takes a collaborative, interdisciplinary approach to a subject of wide and current concern: the role of neighborhood and community structures in the delivery of human services or, as the authors put it, "a place where programs and problems can be fitted together." Social work scholars and students of community practice seeking new conceptual frameworks and insights from research to inform novel community interventions will find much of value in Building Community Capacity.
