The 1st study edition is based on the 2nd hardcover edition of "Business Process Engineering". Several inconsistencies and minor modifications have been carried out. This study edition is a response to many requests for a budget-priced edition for students. This edition pursues a holistic descriptive approach that is based on the Architecture of Integrated Information Systems (ARIS) developed by the author. In addition to the data view, this approach also comprises the function, organization and control views, and encompasses all phases of the information system lifecycle - from analysis, requirements definition and design specification to implementation. The reference models developed here can thus serve as initial models for concrete applications. The illustrations are oriented strongly toward standard software in

order to reflect their significance in terms of real-world representations. In particular, the discussion applies examples from the R/3 system from SAP AG and from the systems from IDS Prof. Scheer GmbH, build on concepts developed by the author. No "user description" of concrete systems is provided; instead, general foundations are laid in order to facilitate a deeper understanding of the application logic that is reflected in standard software. An attempt is made to close the gap between business administration theory and the "operating instructions" of standard software.
