Quotient Rule In calculus, the quotient rule is a method of finding the derivative of a function that is the ratio of two differentiable functions.

Let $f(x) = g(x)/h(x)$, where both g and h are

Access Free Calculus 1 En 2 Math

differentiable and $h(x) \neq 0$.
The quotient rule states
that the derivative of $f(x)$
is $f'(x) = (g'(x)h(x) - g(x)h'(x)) / [h(x)]^2$.

Calculus is a branch of mathematics that involves the study of rates of change. Before calculus was invented, all math was static: It could only help

For instance, $f(x)$ has the same sign for all x in the first interval $(1; 1/2)$. Now we choose a number we like from this interval (e.g. $1/3$) and find the sign of $f(1/3)$: $f(1/3) = (4)(2)(3)$ is positive.

Therefore $f(x) > 0$ for all x in the interval $(1; 2)$. In the same way we find $f(x) > 0$ for $x < 1$.

apply and remember. The
topics include continuity,
limits of functions; proofs;
differentiation of
functions; applications of
differentiation to minima
