The CARESCAPE Monitor B450 is well suited for all flexible-acuity care areas where size and portability are a concern, including emergency departments, recovery rooms, and step-down units. Its wireless capabilities and portable design help match the needs of high-acuity patients during intra-hospital transport and stay with your patient virtually anywhere, giving you continuous monitoring ...

Acute organ damage and the ensuing multiple organ failure are the result of a pathophysiological process involving various cytokines. Once activated, these proteins cannot be eliminated even when the kidneys function at their maximum capacity. To counteract this mechanism, researchers in Japan have developed an innovative concept employing blood purification to remove the overwhelming cytokines. This book describes the use of hemodiafiltration to inhibit the cytokine storms which cause serious organ damage in patients with septic shock. Moreover, the technical construction of the blood purification system, which includes various machines, devices, membranes, fluids, etc., is explained in detail. Finally, leading experts discuss the concept of continuous renal replacement therapy as the standard care in critically ill patients with severe acute kidney injury. Describing the current state of acute blood purification, this publication provides new impulses and opens new avenues in the treatment of acute organ damage.

This workbook gives nurses and nursing students the opportunity to practice and perfect their rhythm interpretation skills on more than 600 realistic ECG strips. Introductory text offers a refresher on cardiac anatomy and physiology and ECG basics, and subsequent chapters provide in-depth coverage of each type of arrhythmia, pacemakers, and 12-lead ECGs, with scores of practice strips in each chapter.

Smooth the managerial side of running a small- to mid-sized contracting firm with this paperwork slashing, time-saving, business-boosting reference. Readers will find methods, strategies and tactics, forms, checklists, and ready-to-copy letters laid out in a concise easy-to-follow format. The new fourth edition offers 20% more forms and checklists, covers the latest developments in construction management software, along with new material on the Design-Build process. The CD-ROM contains project delivery forms, sample letters, checklists, and more.

This work provides newcomers and more experienced researchers with the very basics of magnetoencephalography (MEG)

and electroencephalography (EEG)-two noninvasive methods that can inform about the neurodynamics of the human brain on a millisecond scale. These two closely related methods are addressed side by side, starting from their physical and physiological bases and then advancing to methods of data acquisition, analysis, visualization, and interpretation

Anesthesiology: A Comprehensive Review for the Written Boards and Recertification is a high-yield, streamlined study aid. It contains more than 1000 updated, realistic multiple-choice questions tailored to the question content of recent American Board of Anesthesiology (ABA) exams. To maximize reading efficiency, key messages are repeated and highlighted in the bullets. While focusing on most-frequently tested keywords by the ABA, this book also covers new "emerging" topics such as patient safety, statistics, and ethics. Well-chosen illustrations and graphs are used to enhance the learning experience. Also novel is a high-yield summary of the 60 most frequently tested topics and concepts to be reviewed just before taking the boards. With this book as guidance, readers will be able to efficiently prepare for the written primary certification or recertification anesthesiology board exam.

This book details the major empirical studies of cooperative breeding birds and explores the diversity of ideas and controversies which have developed in this field.

Rubinstein is the pioneer of the well-known score function and cross-entropy methods. Accessible to a broad audience of engineers, computer scientists, mathematicians, statisticians and in general anyone, theorist and practitioner, who is interested in smart simulation, fast optimization, learning algorithms, and image processing.

Following the publication of the department of health document - Comprehensive Critical Care (2000), the majority of hospitals in England have set up Critical Care Outreach Teams. The Government provided a significant sum of money for hospitals to set up outreach services. There are now calls for an evaluation of their impact. The book is set out in five key sections. Each section features chapters that address the conceptual and real life issues. In each section there is a chapter, set out as a case study example, demonstrating how innovative practices and service developments are going on around critical care outreach. The book will draw upon the knowledge, experience and clinical expertise of senior critical care nurses and doctors from a critical care network. The book will have a definite practical application and will provide tips to enhance practice. * Chapters contain useful 'how to' guides, prompts for critical thinking and case studies. * Very little has previously been published on this topic
