Chelation therapy is a method of removing substances from the body through intravenous infusions, and occasionally, orally. In the process of chelation a substance is attached to and transformed by a chelating agent.

This is an easy-to-read manual about chelation therapy. It contains specific protocols for the treatment of chronic metal overexposure, all of which are evidence-based, aiding the inexperienced and the experienced therapist in selecting the optimal chelating agent for the metal(s) in question. Expert chemists and chelation therapists have contributed invaluable knowledge and experience to this book. Most

importantly, this is not a book promoting personal views or preferences. In fact, the information presents and explains different approaches, and allows the reader to draw his own conclusion. All the protocols listed have been modified for the treatment of chronic metal intoxication, included are oral and intravenous treatment plans. The authors explain in simple terms how a chelating agent's bioavailability affects metal binding and how various protocols such as the Cutler Protocol affect the detoxification process, why DMPS binds mercury and which chelators are useful for the detoxification of certain organ system. Also discussed is the importance and effect of treatment pauses. Diagnostic tests are discussed, and which are useful under certain conditions. Shown are tables comparing the average metal binding

ability of the various EDTAs, DMPS, DMSA and other chelating agents. Detailed information explains which chelator binds which metal and why, all of which aids the therapist in finding optimal treatment schedules. Novel chelating agents are presented such as MIADMSA, a new oral chelator specifically designed for arsenic intoxication, or how natural Pectin may be used an alternative for gadolinium intoxication, which metals are bound by lipoic acid and why a slightly alkaline environment supports metal binding, even preventing the often-feared metal redistribution. All in all, this evidence-based chelation "cookbook" should be in medical libraries and on the bookshelf of every physician treating environmental disease.

Chelation Therapy in the Treatment of Metal Intoxication presents a practical guide to the use of chelation therapy, from its basic chemistry, to available chelating antidotes, and the application of chelating agents. Several metals have long been known to be toxic to humans, and continue to pose great difficulty to treat. These challenges pose particular problems in industrial settings, with lead smelting known to be associated with hemopoietic alterations and paralyses, and the inhalation of mercury vapor in mercury mining being extremely detrimental to the central nervous system. Clinical experience has demonstrated that acute and chronic human intoxications with a range of metals can be treated efficiently by administration of chelating agents. Chelation Therapy in the Treatment of Metal Intoxication describes the

Presents all the current findings on the potential for chelation as a therapy for metal intoxication Presents practical guidelines for selecting the most appropriate chelating agent Includes coverage on radionuclide exposure and metal storage diseases Describes the chemical and biological principles of chelation in the treatment of toxic metal compounds

You will find a coherent scientific rationale, clinical trials demonstrating effectiveness, guidelines for safety, detailed protocols for administration, and techniques for pre- and post-treatment laboratory evaluation.

Prime Example tells the story of the State of New York Department of Health versus Warren M Levin, MD. In the late 1980s the Commissioner of Health of New York was a

very brilliant and morbidly depressed individual who suddenly got the idea to rid the state of all of those alternative doctors! He chose Warren Levin, a board-certified family doctor and the son of a doctor. Dr. Levin's practice had never received a complaint from any patient and he had never been sued on the day that the state served a small telephone book sized set of charges against him. Basically, they asserted that everything he did from morning till night in every day of his practice was unprofessional conduct. The state brought in a very, very zealous witness who had an MD and a JD and was a self-professed quack buster. He spent much of his time testifying against physicians and testified before many government bodies including the U.S. Congress where he specifically mentioned Dr. Levin as a quack on

several occasions. The Levin defense brought in an extraordinary compliment of witnesses on his behalf. Among them was Linus Pauling, PhD, with almost 50 honorary MDs and PhD's. He was at the time he testified and remains the only human being to have received two individual Nobel prizes. There were many others, many of them tops in their fields with hefty titles and accomplishments who testified for Levin and much of that testimony is referred to and/or excerpted in "Prime Example". Since the administrative law judge, the prosecutor and the three members of the panel sitting as a mini jury were more beholden to and selected by the Commissioner of Health. Levin knew that no matter what Harris did for him he was going to lose. His hope was that Harris would make a good record which could be presented

to the Regents who usually saw the truth for what it was. In the end that's exactly the way it played out and Dr. Levin is still practicing medicine today for the lucky patients of northern Virginia. The state simply could not make him, it's "Prime Example".

3. Chelation Therapy, how it works, where to seek help
Chelation Therapy has been in medical use for decades to treat the patients intoxicated with heavy metals like lead, mercury, arsenic and many others. The procedure involves use of FDA approved chelating agents like ethylene diamine tetra acetic acid (EDTA). Dimercaptosuccinic acid (DMSA) is another chelating agent used for the treatment of lead poisoning in children. However chelation therapy has not

been approved by FDA for anything other than removal of heavy metals. Nevertheless Alternative medicine practitioners frequently use chelation therapy for helping patients with Heart disease. Hardening of arteries reduces the flow of blood through them thus affecting the much needed nourishment and oxygen to different parts of body. However administration of EDTA intravenously has proven time and time again effective against reversing the hardening of arteries and improving the blood flow. The treatment is almost painless. You simply lie down or sit up hooked up to a I V drip , read your book, sip on water, or simply relax and watch TV. The process takes about an hour and a half per sitting, depending upon your dosage. I am told 3 grams is full dose (bag)and one can start with half of that(half bag).

You are encouraged to take a drink of water frequently as you would make a trip or two to empty your bladder to flush out the toxins. The procedure is conducted and supervised under a qualified medical practitioner. Your doctor will normally order blood test for you before and after few treatments to check your kidney function. Also your doctor will decide the total number and the frequency of these treatments depending on your situation. So basically the chelating agent like EDTA binds with the deposits and heavy metals in your blood and thus slowly flushing them out in your urine. Hence the importance of drinking water. Introducing Integrative Medicine. According to ACAM integrative medicine combines conventional care with alternative medicine to improve patient care. Rather than

ACAM physicians do not shun western medicine, in fact they practice western care every day. These physicians are unique in that they incorporate appropriate and proven alternative treatment options. Introducing ACAM-American College For Advancement In Medicine. ACAM organization located in Irvine California, trains and certify all licensed healthcare providers, including M.D's, DO's, ND's, Phd's and DC's and many more in integrative medicine. Research shows that it may take a very long time, months or years in some cases to see any desired benefits. However intravenous Chelation Therapy many times is able to achieve these required benefits in days. Unfortunately IV therapy could be expensive as it may not be covered by your

Reported Benefits of Chelation Therapy: * Lowers Cholesterol * Helps lower blood pressure * Helps getting rid of cramps * Curb the Hair loss and even grow new hair * Reduce insulin dependence. Great for diabetics * Improve eye sight and avoid cataracts * Even post surgery cataract patients will enjoy fully restored sight *Sharpen memory and mental functions * look younger with less wrinkles and healthy nails * Avoid cold feet and hands and improve physical energy * Improved sex life * Reduce allergies * Improve cardiac health * Excellent cure for Alzheimer's disease *Helps maintain ideal weight *Reduces pain from arthritis and the list goes on. The Chelation Process Before actual treatment is scheduled your doctor

should run your necessary lab reports for blood, urine and kidney functions. Also should check your blood for metal toxicity and go over your medical history including blood pressure and blood sugar. This would help your doctor to adjust your EDTA dosage and frequency of treatments. Your doctor knows best. Just follow his/her advice. If your primary doctor has covered some of these tests very recently you should take copies of these reports to this doctor, if you can. However I warn you if you will ask your primary doctor about Chelation therapy, most probably he will not approve it. You see main stream medical practitioners do not believe in these treatments. However when it was their own health involved these same doctors in several cases have opted for Chelation. According to National Institute of Health, over

800,000 patients opted for Chelation therapy in the United States in a single year! Kindly note this process is also advisable for heart patients who have already gone through the bypass as chances are the vein grafts used in bypass do get clogged again within next year or two. The chelation has been successfully used even for patients over age 90, hence age is not a issue factor normally. The process itself is painless. It is intravenous prick with a needle to start the EDTA drip. Though you are tied to IV equipment, mostly on wheels, you are free to move or use restroom as your arm is properly secured with tape. You can also simply sit with pillow supporting your back or lie down. You are free to move about, talk to other patients undergoing the same treatment, read a book or do your office / paper work, or

As they say it is better to die healthy when you are very old than to die young and unhealthy. Normal duration of this treatment is between 1-2 hours. You will start seeing some benefits after 4 to 5 treatments. Ten to 30 treatments are common depending upon your personal medical issues. You can also ask your doctor if you are a good candidate for a lower dosage (or half a bag) treatments saving you time and may be money. Make sure you communicate well with your

doctor, if Chelation makes you feel dizzy or uncomfortable, weak or lethargic due to low blood pressure possibly. 99% of the times I believe you will have no side effects. EDTA is a mild diuretic and if you have frequent visits to bathroom consider that as a good sign. Drink plenty of water to help flush your kidneys. Average cost for Chelation treatments Costs vary from clinic to clinic but would run approx. around \$100-\$150 per treatment. Most of the insurance providers do not cover the cost. If you have time and patience and money you can fight the insurance provider and plead your case. I believe insurance pays if the chelation is for removal of toxic metals. Check with your doctor. Almost 12 years ago when I took the treatments my insurance company finally paid half of the cost. May be we should approach AARP

She was semi-comatose - slipping in and out of sleep. Then, one of her sons arrived with news about Chelation therapy. Her doctor could not promise the family anything, as their Mamma was so far gone. She received the therapy, and improved steadily. The paralysis left. She re-learned everything she had lost: eating, drinking, talking coherently, moving around first with a walker, then without. Her first Chelation course consisted of 21 infusions. Later she took 20 more, at intervals of several months between series of 5. She is now well and carrying on a productive life. comes to a dramatic conclusion: Chelation with EDTA cuts the incidence of Cancer by 90%. My personal story: Recently I took 6 additional EDTA Chelation treatments. One a week. I had amazing positive results. I was on 50 mg of Losartan for B.P. and 20 mg of Lipitor for my Cholesterol before the treatment. After the six treatments I quit my BP medications and it has been two months now my BP is normal. I reduced my Lipitor to 10 mg per day. My Lipid profile was excellent after the Chelation. My total Cholesterol dropped from 187 to 140 and Triglycerides dropped from 199 to 119 and LDL bad cholesterol dropped from 92 to 72. I am amazed I am off the BP prescription. My primary doctor does not know about chelations I took. However he was very happy with my lipid Profile and BP. P.S. You may get a laugh at what I am about
