~~Chemical And Catalytic Reaction Engineering~~

Catalysis and Reaction

Engineering Chemical reactions lie at the heart of processes where molecules are transformed from raw materials to useful products and energy. For the economic utilisation of such chemical transformations the unit where they are performed (the reactor) needs to be carefully designed accounting for kinetics, hydrodynamics, mass and heat

~~Chemical and Catalytic Reaction Engineering - Knovel~~

The Reaction Engineering and Catalysis group pursues excellence in both theoretical and experimental aspects, targeting commercially important applications from a fundamental standpoint with a mix of classical and modern concepts and techniques. Thus, the focus of the group is on classical areas such as process design and optimization as well as modern areas such as biofuels (from raw materials to products), advanced energy technologies such as fuel cells, electro-synthesis of new

Engineering

Catalysts and catalytic reactions lie at the heart of the chemical process industry. Many of the chemical (and biological) transformations necessary to make fine and specialty chemicals involve the use of catalysts. Several such examples are discussed in Part II of this book.
