Although orthodontic treatment with fixed appliances has become an integral part of contemporary orthodontics, it has also been associated with certain adverse effects including root resorption, the development of white spot lesions, or periodontal implications, including loss of alveolar bone and loss of periodontal attachment (1-3).

Effect of orthodontic treatment on periodontal clinical ...

Background: Insertion of orthodontic fixed appliances has been known to induce a mostly transient qualitative and quantitative alteration of the intraoral microbiota. However, the extent to which treatment with fixed appliances might have a lasting adverse effect on the periodontal attachment of the teeth has not yet been investigated in an evidence-based manner.

Effect of Orthodontic Treatment on Periodontal Clinical ...

Reduced periodontal support is a challenge that clinicians often face during rehabilitation of compromised dentition. The close and intricate relationship between the periodontal tissues and the processes of tooth movement suggest that adjunct orthodontic therapy may play an important role in overcoming these problems.
