Design of smoke management systems [9,10]. The heat release rate of the fire  $Q$  (in kW) at time  $t$  (in s) after ignition is given by:  $Q = 1000(t/t_g)^2$  (1) where  $t_g$  is the growth time, defined by the time taken for the heat output to reach 1055 kW. It has been suggested that fires may be ...

with the idea of an encyclopedia for the topic of risk, this book has been completely reworked. Not only are many updated examples included in chapter "Risks and disasters" but also new chapters have been introduced, such as the chapter "Indetermination and risk". This new chapter was developed since the question "Is it possible for risks to be completely eliminated, and if not why?" has become a major point of concern. Therefore, especially in this chapter, the focus of the book has - tended from a simple mathematical or engineering point of view to include much broader concepts. Here, not only aspects of system theory have to be considered, but also some general philosophical questions start to influence the considerations of the topic of risk. The main goal of this edition, however, is not only the extension and revision of the book, but also the translation into the English language to allow more readers access to the ideas of the book. The author deeply hopes that the success the book made in the German edition continues and that readers experience a major gain from reading the book.

Polycystic ovary syndrome (PCOS) is one of the most common reproductive health problems of women. Despite this, its effective treatment remains a significant challenge to the medical profession. This second edition (published 2007) of a highly successful and well-reviewed book is a thorough update on the syndrome, its aetiology, pathology, impact on infertility, and effective medical management. Every chapter has been extensively referenced and completely revised and updated. New chapters cover: hyperinsulinemic insulin resistance; new treatments including in-vitro maturation; paediatric origins, including the Barker Hypothesis; adrenocortical dysfunction; polycystic ovary syndrome in non-western societies; surgical treatment of obesity associated with polycystic ovaries, and treatment with vitamins and minerals. The book is a reference text for all clinicians with an interest in reproductive endocrinology, including gynaecologists, IVF specialists and obstetricians.
