Exercise causes the heart to pump blood into the circulation more efficiently as a result of more forceful and efficient myocardial contractions, increased perfusion of tissues and organs with blood, and increased oxygen delivery. Aerobic exercise trains the heart to become more efficient. Aerobic conditioning exercises, such as running and swimming, train the heart and lungs to pump blood more efficiently, allowing more oxygen to get to muscles and organs.

## ~~Exercise and the Heart | Boundless Anatomy and Physiology~~

Ideal exercise for the heart. The best exercise has a positive effect on the heart and improves the skeletmuscular system. The American Heart Association and the American College of Sports Medicine both recommend combining aerobic exercise (jogging, swimming, biking) with resistance training (moderate weightlifting).

~~Large muscles in a repetitive fashion, activating muscle fibers programmed for endurance and utilizing a heart rate range anywhere from 40 to 85 percent of your maximum heart rate. Think: running, jogging, swimming, biking, or spinning.~~

## ~~How Does Exercise Affect Your Heart? | ACTIVE~~

~~While exercise can help to grow and strengthen your heart muscle, if your left ventricle becomes thicker as a result of high blood pressure, this could lead to heart disease. Being physically active can also help keep your blood pressure healthy.~~

## ~~How does exercise help to look after your heart?~~

~~Description The new edition of Exercise and the Heart offers the essential clinical and scientific information on exercise testing and interpretation. Balancing the essential physiology with a problem based approach to cardiac problem management, this new edition provides the clinician with a resource for diagnosis and treatment with exercise.~~

## ~~Exercise and the Heart | ScienceDirect~~

~~Regular exercise also improves factors linked to cardiovascular health, resulting in lower blood pressure, healthier cholesterol levels, and better blood sugar regulation. And that's not all: Exercise also promotes positive physiological changes, such as encouraging the heart's arteries to dilate more readily.~~

~~The many ways exercise helps your heart~~  
~~Harvard Health~~

Exercise intensity, as well as the type of exercise, is clearly a major determinant.<sup>3–6, 13</sup> However, huge variability in exercise-induced cardiac remodelling, so-called athlete's heart, exists among highly trained athletes,<sup>14</sup> and only a minority will suffer exercise-induced cardiovascular harm. Individual genetic backgrounds modulate the features of athletes' hearts, which also probably has a role in individual susceptibility to exercise-induced harm.

~~Exercise and the heart: unmasking Mr Hyde | Heart~~

However, the more you do, the better, and taking part in activities such as sports and exercise will make you even healthier. For any type of activity to benefit your health, you need to be moving quick enough to raise your heart rate, breathe faster and feel warmer. This level of effort is called moderate intensity activity. If you're working at a moderate intensity you should still be able to talk but you won't be able to sing the words to a song.

~~Benefits of exercise — NHS~~
