This book addresses aspects of rice production in rice-growing areas of the world including origin, history, role in global food security, cropping systems, management practices, production systems, cultivars, as well as fertilizer and pest management. As one of the three most important grain crops that helps to fulfill food needs all across the globe, rice plays a key role in the current and future food security of the world. Currently, no book covers all aspects of rice production in the rice-growing areas of world. This book fills that gap by highlighting the diverse production and management practices as well as the various rice genotypes in the salient, rice-producing areas in Asia, Europe, Africa, the Americas, and Australia. Further, this text highlights harvesting, threshing, processing, yields and rice products and future research needs. Supplemented with illustrations and tables, this text is essential for students taking courses in agronomy and production systems as well as for agricultural advisers, county agents, extension specialists, and professionals throughout the industry.

International networks; Varietal improvement; Soil, crop, and water management; Pest management; Technology transfer.

A revised edition of the comprehensive production management handbook. Written by international experts, this guide presents a systems perspective on high-quality, cost-effective manufacturing, addressing both high-volume and low-volume production needs. The introductory section covers capacity, planning, competitive strategies, and performance and productivity measurement. The succeeding seven sections cover manpower, methods, machines, materials, money, space and systems.

Rice in the Cambodian economy: past and present; Topography, climate, and rice production; Soils and rice; Rice-based farming systems; Rice ecosystems and varieties; Pest management in rice; Farm mechanization; Capture and culture ricefield fisheries in Cambodia; Constraints to rice production and strategies for improvement.

Rice ecosystems; Nutrient management; Mineral deficiencies; Mineral toxicities; Tools and information.

Rice growing soils: constraints, utilization and research needs; Rice soils of Asia: distribution and management; Classification of rice growing soils; Rice soils of Japan; Rice soils of Sri Lanka; Process of padification in Korea; Fertility management of rice soils in R.O.C. on Taiwan; Fertility capability classification of Taiwan soils; Constraints to the use of rice soils for upland crops in R.O.C. on Taiwan, with particular reference to corn; The soil taxonomy system: important rice soils of Asia.

These proceedings report the outcome of an international workshop held in Vientiane, Laos, between 30th October and 2nd November 2000 to coincide with the beginning of a new ACIAR project, Increased productivity of rice-based cropping systems in Lao PDR, Cambodia and Australia.
