material.

## Guide to Firewalls and Network Security:

### Intrusion ...

A firewall is a network security system that controls and monitors incoming and outgoing network traffic. Firewalls have two types, the first one is Hardware Firewalls and another

# Online Library Guide To

one is Software firewalls.  
Hardware firewalls have separate hardware with their own Operating System, CPU, RAM, and different types of interfaces (ports).

Software Firewall, basically a software that can install in other operating systems like Windows, Linux, and MAC.

Basically, a firewall does three things to protect your network:

- It blocks incoming data

# Online Library Guide To

that might contain a hacker attack. • It hides information about the network by making it seem that all outgoing traffic originates from the firewall rather than the network. This is called Network Address Translation (NAT).

Firewalls fall into either

# Online Library Guide To

of these two categories:  
network-based firewall  
or host-based firewall.

Network-based firewalls  
sift traffic between two  
or more networks on  
network hardware.

Meanwhile, host-based  
firewalls run on host  
computers and handle  
network traffic on them.

Packet Filters. Packet  
filters or network layer  
firewalls are the first

# Online Library Guide To

reported kind of  
firewalls. These firewalls  
inspect the packets  
transferred among  
computers.
