The Human Fertilisation and Embryology Act 1990 sets out prohibitions relating to the creation, use and storage of human embryos and human admixed embryos, and the use and storage of human gametes. Some of these prohibitions are absolute – for example, a human embryo can never be placed in an animal or vice versa.

Prenatal development (from Latin natalis 'relating to birth') includes the development of the embryo and of the fetus during a viviparous animal's gestation. Prenatal development starts with fertilization, in the germinal stage of embryonic development, and continues in fetal development until birth.. In human pregnancy, prenatal development is also called antenatal development.

Human embryogenesis Embryogenesis, the first eight weeks of development after fertilization, is an incredibly complicated process. It's amazing that in eight weeks we're transforming from a single cell to an organism with a multi-level body plan. The circulatory, excretory, and neurologic systems all begin to develop during this stage.

An embryologist is a scientist who studies embryology. Any organism that reproduces sexually must create some sort of embryo as it develops into an adult form. An embryologist may study the development of animals, plants, and even fungi. Evolutionary biologists often study embryology as a means of understanding complicated lines of evolution.
