Safe disposal of faeces by sanitation; Handwashing at critical times; and Ensuring access to adequate safe water at point of use. Other hygiene practices such as improved food hygiene and solid waste management are important as well; practitioners generally introduce these once the three primary interventions are in place. Of course the ranking of risks may vary from one community to another, for example in some communities risks associated with poor food hygiene may be greater than those ...

Looking at the hygiene and grooming practices of people living over half a millennium ago is a perfect distraction from your own miserable failures and existential quandaries, and everyone you're making fun of is too far gone to care or defend themselves, so really, it's a perfect setup. We wouldn't try to take that away from you.

~~Medieval Hygiene: Practices Of The Middle Ages — HealthyWay~~

Medical hygiene pertains to the hygiene practices related to the administration of medicine and medical care that prevents or minimizes the spread of disease. Medical hygiene practices include: Isolation or quarantine of infectious persons or materials to prevent spread of infection. Sterilization of instruments used in surgical procedures.

Hygiene—Wikipedia

Good hygiene practices reduce the incidence of diseases such as pneumonia, trachoma, scabies, skin and eye infections and diarrhoea-related diseases like cholera and dysentery. Research shows that regular handwashing with soap can reduce the number of incidents of diarrhea, a disease which can be deadly for children, by around 50 percent.

Hygiene | Water, Sanitation and Hygiene | UNICEF

A sanitation plan is important in any food service preparation area. It ensures that all surfaces are cleaned on a regular basis and reduces the risks of transferring bacteria or other pathogens from an unclean surface to clean equipment such as cutting boards or tools. A sanitation plan has two components:
