The US Rider-Ericsson Engine Company was the successor of the DeLamater Iron Works and the Rider Engine Company, having bought from both companies their extensive plants and entire stocks of engines and patterns, covering all styles of Rider and Ericsson hot air pumping engines brought out by both of the old companies since 1844, excepting the original Ericsson engine, the patterns of which were burned in the DeLameter fire of 1888.

Rider-Ericsson Engine Company - Wikipedia

Most Ericsson engines were used solely for pumping water. The engine was designed by John Ericsson (1803-1889) and improved by Thomas Rider and Richard Sayer. Rider's father, Alexander, had invented a hot air engine of a different type, and the Rider Ericsson Engine Company was formed to continue making both styles of engine.

Ericsson hot air engine, 1888-1895 - MAAS Collection

This is a Rider style hot air engine built by the Rider Ericsson Engine Company. The bore of each cylinder is 8". The engine stands over 7 feet tall.
