Whiteflies feed off plants by sucking the plant's juices. They can cause wilting, stunting, and death. 2 As with their relatives the aphids, mealybugs, and scale, a whitefly population can grow quickly. The best way to control whiteflies is to constantly monitor for them and use a combination of techniques to keep their population down.

~~Identifying Plant Pests and Diseases—The Spruce~~

Some of the feather-winged beetles and parasitic wasps are almost microscopic, while some tropical forms such as the hercules beetles, African goliath beetles, certain Australian stick insects, and the wingspan of the hercules moth can be as large as 27 cm (10.6 inches). African goliath beetle (Goliathus giganteus).
