Jabiru 3300 Engine Problems File Type

The 3300 is a modular development of Jabiru's flat-four 2200 engine. In November 2014 the Australian Civil Aviation Safety Authority proposed restricting all Jabiru-powered aircraft to day-visual flight rules only, without passengers or solo students and within gliding distance of a safe place to land due to the engine line's safety record. This was in response to 46 reports of engine failure in flight.

Jabiru 3300 - Wikipedia

However, maybe someone bought one for a swap-out with their earlier generation 3300 and in that case, could be flying it relatively quickly. Although my 3300 is at about 550 hrs and running great, I'm interested to see how the new engine's field experience turns out. Hopefully we'll get some reports soon!  
John. N750A

Jabiru 3300 Gen 4 performance - Zenith Aircraft Builders ...

Problems with Jabiru engines include failures of through bolts, flywheel bolts and valve train assemblies, as well as cylinder cracking. The failures affect a range of Jabiru engine models and have occurred in aircraft used in different flying activities, although many have been reported in aircraft used for flying training.

safety - Do Jabiru aircraft have a long history of engine ...

flybymike wrote:For my retirement present to myself I'm contemplating the purchase of an LSA type, most of which seem to use the ubiquitous 912 Rotax, but some use the ostensibly more powerful Jabiru 3300. I recall some recent horror stories about JAB engines and even groundings by the CAA. Does any one have any helpful info on reliability or other stuff on these two engine types?
