New edition of a text in which six researchers from leading institutions discuss what is known and what is yet to be understood in the field of cell biology. The material on molecular genetics has been revised and expanded so that it can be used as a stand-alone text. A new chapter covers pathogens, infection, and innate immunity. Topics include introduction to the cell, basic genetic mechanisms, methods, internal organization of the cell, and cells in their social context. The book contains color illustrations and charts; and the included CD-ROM contains dozens of video clips, animations, molecular structures, and high-resolution micrographs. Annotation copyrighted by Book News Inc., Portland, OR.

The Problems Book helps students appreciate the ways in which experiments and simple calculations can lead to an understanding of how cells work by introducing the experimental foundation of cell and molecular biology. Each chapter reviews key terms, tests for understanding basic concepts, and poses research-based problems. The Problems Book has be

Bryce Weir is a high-profile, respected neurologist. Dr. Macdonald is a colleague of Dr. Weir's and is a "rising star" in the field of neurology. This book is the first to cover all aspects of cerebral vasospasm in depth. It takes the reader from the first descriptions of this puzzling and deadly phenomenon to the latest laboratory evidence explaining its pathophysiology. Packed with clinical pearls, it is a must for neurosurgeons, interventional radiologists, neurologists, and neuropathologists. Key Features * Examines the current understanding of vascular smooth muscle physiology * Provides in-depth overviews of symptoms and treatments * Written by acknowledged experts on the subject * Vividly illustrated with beautiful photographs and diagrams * Cites over 4,000 key papers on vasospasms * Presents key data in an easy-to-use format

A successful Wall Street trader turned Cambridge neuroscientist reveals the biology of financial boom and bust, showing how risk-taking transforms our body chemistry, driving us to extremes of euphoria or stressed-out depression. The laws of financial boom and bust, it turns out, have a lot to do with male hormones. In a series of startling experiments, Canadian scientist Dr. John Coates identified a feedback loop between testosterone and success that dramatically lowers the fear of risk in men, especially young men; he has vividly dubbed the moment when traders transform into exuberant high flyers "the hour between dog and wolf." Similarly, intense failure leads to a rise in levels of cortisol, which dramatically lowers the appetite for risk. His book expands on his seminal research to offer lessons from the exploding new field studying the biology of risk. Coates's conclusions shed light on all types of high-pressure decision-making, from the sports field to the battlefield, and leaves us with a powerful recognition: to handle risk isn't a matter of mind over body, it's a matter of mind and body working together. We all have it in us to be transformed from dog to wolf; the only question is whether we can understand the causes and the consequences.

How are Christians to approach the central gospel teachings concerning the death and resurrection of Jesus? The Bible firmly establishes the historicity of these events and doesn't leave their meanings ambiguous or open to interpretation. Even so, there is an irony and surprising strangeness to the cross. Carson shows that this strange irony has deep implications for our lives as he examines the history and theology of Jesus's crucifixion and resurrection. Scandalous highlights important theological truths in accessible and applicable ways. Both amateur theologians and general readers will appreciate how Carson deftly preserves weighty theology while simultaneously noting the broader themes of Jesus' death and resurrection. Through exposition of five primary passages of Scripture, Carson helps us to more fully understand and appreciate the scandal of the cross.

This revised workbook/lab text consists of 21 projects that can be executed with readily available materials, a minimum of elaborate equipment and a reasonable amount of preparation time. Early projects deal with biochemistry and cytochemistry; the middle ones focus on organelles and their physiology; and later activities explore more advanced molecular topics such as restriction mapping strategies. New to this edition: a concise section on statistics covering the mean, standard deviation and standard error; and a chapter designed to enable students to write up their work as a lab report.
