Liver Disease discusses modern physiological and pathological concepts about liver in a concise manner. The author reviews the liver structure and functions including hepatic clearance, metabolism of carbohydrates, proteins, or fats, as well as the integrity of the liver (dependent on blood flow, blood pressure, oxygen supply, or carbon dioxide concentrations). Investigations of liver diseases involve the following tests: urine, stools, biochemical, hematology, corticosteroids, radiology, biopsy, or peritoneoscopy. The author also discusses hepatitis, cholestatic jaundice, and toxic liver injury. The liver oxidizes around 95

percent of ingested alcohol by converting it to acetaldehyde, a toxic substance. Anorexia, nausea, vomiting, abdominal pain, or jaundice can follow after alcohol ingestion; gastrointestinal bleeding leads to gastritis or to a ruptured esophageal varices. The author also explains malignant diseases of the liver such as malignant hepatoma, secondary carcinoma or hypernephroma. Other liver diseases include portal cirrhosis and portal hypertension which is blood flow obstruction to either inside or outside the liver. This book is suitable for medical students, laboratory researchers involved in liver diseases, as well as doctors of general medicine.

most prominent authors in the field, this book will be of use to basic and clinical scientists and clinicians working in the biological sciences, especially those dedicated to the study and treatment of liver pathologies. Presents the most recent advances in hepatology, with a special focus on the role of oxidative stress in liver injury. Provides in vivo and in vitro models to study human liver pathology. Explains the beneficial effects of antioxidants on liver diseases. Contains the most recent and modern treatments of hepatic pathologies, including, but not limited to, stem cells repopulation, gene therapy and liver transplantation.

...ring (fibrosis) of the liver caused by many forms of liver diseases and conditions, such as hepatitis and chronic alcoholism. Eventually, the liver becomes injured - whether by drugs, alcohol, or other causes - and the liver tissue forms. As cirrhosis progresses, more and more liver tissue is replaced by scar tissue, making the liver's function (detoxification and protein synthesis). Advanced cirrhosis is life-threatening. The liver damage done by cirrhosis is generally not reversible. But if liver cirrhosis is diagnosed early and the underlying cause is treated, further

speciality, and nurses and health care professionals need to have the relevant knowledge and skills to care for patients with liver problems in a safe and effective way. Liver Diseases is a comprehensive, evidence-based, practical guide to the nursing care and management of patients with liver disease. Liver Diseases explores a range of liver conditions, including cirrhosis, portal hypertension, alcoholic liver disease, viral hepatitis, autoimmune hepatitis, Wilson ' s disease and acute liver failure. It looks at the anatomy & physiology of the liver, assessment of liver function and diagnostic studies, acute and chronic liver disease, pregnancy related liver disease, liver transplantation and infectious liver diseases. For each condition the epidemiology, complications and nursing management are provided, along with illustrative case studies and further reading. Liver Diseases is an
