Water resources planning: managing supply and demand - GOV.UK

Manage water resources sustainably and promote water efficiency. It's our job to keep the North West flowing by maintaining adequate water supplies for our customers, while balancing their needs against those of the environment. This requires a process of continual planning; leakage reduction; raising customer awareness about the importance of saving water, and bespoke projects to minimise our impact in environmentally sensitive areas.

United Utilities - Managing water resources

The conference provides a platform for professionals involved in sustainable water resources management to exchange knowledge and gain an insight into the state of the art in the current technology, techniques and solutions in that field as they have been developed and applied in different countries.

Sustainable Water Resources Management 2021

CIWEM's 2018 position on planning water resources recommends "Adoption of a "security through diversity" approach to managing water resources": "CIWEM advocates a strong commitment to the twin-track approach, moving towards a more formalised "security through diversity" approach.

Current and future challenges for water resources management

Water resource management is the activity of planning, developing, distributing and managing the optimum use of water resources. It is a sub-set of water cycle management. Ideally, water resource management planning has regard to all the competing demands for water and seeks to allocate water on an equitable basis to satisfy all uses and demands. As with other resource management, this is rarely possible in practice. Water is an essential resource for all life on the planet.

Water Management Importance | Irrigation And Drainage ...

Managing water resources Our water resources 50% of our supply is from surface water (reservoirs and rivers) and 50% of our supply is from groundwater stored in underground aquifers.

Our water resources | Anglian Water Services

Water Resources Management | Home

At least every five years we prepare a Water Resources Management Plan, which sets out in detail how we plan to achieve these outcomes over the next 25 years. In particular we need to ensure we are able to maintain a surplus of supply, known as headroom, over the expected demand for water. In compiling the plan we have taken into account all the factors that will influence the balance of supply and demand for water.

Water Resources Management Plan - South Staffs Water

The mission of NMHSs in general has been described as the provision of reliable, impartial, timely information that is needed to understand the water resources of their area of responsibility, including: Minimizing the loss of life and property as a result of water-related natural hazards, such as floods, droughts and land movement;
