Access Free Marine Phytoplankton

Phytoplankton are an essential base of the marine food web and absorb carbon dioxide dissolved in the ocean that originally came from the atmosphere. The tiny organisms occupy the uppermost layer of ocean water, called the mixed layer, where waves and currents continually churn, drawing up nutrients from a deeper layer of water below.

Diatom - Wikipedia

Marine phytoplankton is a microalgae found in oceans across the world. It ' s also incredibly nutritious. All marine wildlife depend on phytoplankton in some way. The phytoplankton feed the zooplankton and krill, which then feeds the fish and even the largest animal on Earth, the Blue Whale.

Re-Phyto-Lize 100% Pure Marine Phytoplankton!

Phytoplankton is an important food source for many marine animals and thanks to recent photobioreactor technology now available for humans. Phytoplankton provides fish with beneficial omega-3 fatty acids such as EPA. With this new technology we can now skip one step in the food chain and we are no longer strictly dependent on fish or fish oil.
