scholarship and provides a jumping-off point for discussions in the U.S. history classroom and beyond. Long before Whitman and long after, Americans have sung something collectively amid the deafening roar of their many individual voices. The Yawp highlights the dynamism and conflict inherent in the history of the United States, while also looking for the common threads that help us make sense of the past. Without losing sight of politics and power, The American Yawp incorporates transnational perspectives, integrates diverse voices, recovers narratives of resistance, and explores the complex process of cultural creation. Volume I begins with the indigenous people who called the Americas home before chronicling the collision of Native Americans, Europeans, and Africans. *The American Yawp* traces the development of colonial society in the context of the larger Atlantic World and investigates the origins and ruptures of slavery, the American Revolution, and the new nation's development and rebirth through the Civil War and Reconstruction. Rather than asserting a fixed narrative of American progress, *The American Yawp* gives students a starting point for asking their own questions about how the past informs the problems and

Opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than

steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine "smart factories" in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future--one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which

innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

What is a market? To most people it is a shopping center or an abstract space in which stock prices vary minutely. In reality, a market is something much more fundamental to being human, and it affects not just the price of tomatoes but the boundaries of everything we value. Reading the newspapers these days, you could be forgiven for thinking that markets are getting ever more efficient—and better. But as Tim Sullivan and Ray Fisman

argue in this insightful book, that view is far from complete. For one thing, efficiency isn't always a good thing—illegal markets are very often more efficient than legal ones, because they are free of concern for laws and human rights. But even more importantly, the chatter about efficiency has obscured a much broader conversation about what kind of economic exchange we actually want. Every regulation, every sticker price, and every sale is part of an ever-changing ecosystem—one that affects us as much as we affect it. By tracing 50 years of economic thought on this subject, Fisman and Sullivan show how markets have evolved—and how we can keep making them better. This leads to fascinating and surprising insights, such as: Why your \$10,000 used car is likely to sell for \$2,000 or

less; Why you should think twice before buying batteries on Amazon; and Why it's essential that healthy people buy medical insurance. In the end, *The Inner Lives of Markets* argues for a new way of thinking about how you spend your money—it shows that every transaction you make is part of a grand social experiment. We are all guinea pigs running through a lab maze, and the sooner we realize it, the more effectively we can navigate the path we want.

The most powerful force in the world economy today is the redefinition of the relationship between state and marketplace - a process that goes by the name of privatization though this term is inadequate to express its far-reaching changes. We are moving from an era in which governments

sought to seize and control the 'commanding heights' of the economy to an era in which the idea of free markets is capturing the commanding heights of world economic thinking. Basic views of how society ought to be organized are undergoing rapid change, trillions of dollars are changing hands and so is fundamental political power. Great new wealth is being created - as are huge opportunities and huge risks. Taking a worldwide perspective, including Britain, where the process began with Mrs Thatcher, Europe and the former USSR, China, Latin America and the US, **THE COMMANDING HEIGHTS** shows how a revolution in ideas is transforming the world economy - why it is happening, how it can go wrong and what it will mean for the global economy going into the twenty-first
