Kjell A. Doksum is a senior scientist in the Department of Statistics at the University of Wisconsin-Madison. His research encompasses the estimation of nonparametric regression and correlation curves, inference for global measures of association in semiparametric and nonparametric settings, the estimation of regression quantiles, statistical modeling and analysis of HIV data, the analysis of financial data, and Bayesian nonparametric inference.

A famous simple and intuitively reasonable estimate is Stein's positive part estimate, $u0012 u0013 p?2 ? ? (X?p) = 1 ? X?p (I.7) |X?p |2 +$ where if y is a scalar, $y+ ? max (y, ? 0)$. This estimate shrinks X?p towards 0 and if the distance of X?p from 0 is smaller than p ? 2 declares the estimate to be 0.

Mathematical statistics: basic ideas and selected topics. Peter J. Bickel, Kjell A. Doksum. This classic, time-honored introduction to the theory and practice of statistics modeling and inference reflects the changing focus of contemporary Statistics. Coverage begins with the more general nonparametric point of view and then looks at parametric models as submodels of the nonparametric ones which can be described smoothly by Euclidean parameters.

Bickel and Doksum is of course a standard text in mathematical statistics. The development of the theory is thorough but not as complete as books by Lehmann or Cassella and Berger. I felt that Bickel and Doksum occasionally left out important theorems and details. Also, the examples given were sometimes unhelpful or irrelevent.
