Excel Formulas and Functions For Dummies Cheat Sheet

A function is a pre-defined calculation built into Excel that makes it easier to write formulas. For instance, in the cheat sheet below: Today() is a function that gives you the current date. Today()+10 is a formula that adds 10 days to the current date. The terms formula and function are often used interchangeably, so we will stick to using "formulas" to avoid confusion in this basic cheat sheet. Just remember,

The CELL function can return a variety of information about the contents of a cell (such as its name, location, row, column, and more). The LEFT function can return text from the beginning of a cell (left to right), MID returns text from any start point of the cell (left to right), and RIGHT returns text from the end of the cell (right to left).
