Enhanced by nearly 150 images of painting, sculptures, photographs, quilts, and other work by black artists, offers a survey of African American history which covers the predominant political, economic, and demographic conditions of black Americans.

Narrative of Sojourner Truth is one of the most important documents of slavery ever written, as well as being a partial autobiography of the woman who became a pioneer in the struggles for racial and sexual equality. With an eloquence that resonates more than a century after its original publication in 1850, the narrative bears witness to Sojourner Truth's thirty years of bondage in upstate New York and to the mystical revelations that turned her into a passionate and indefatigable abolitionist. In this new edition, which has been edited and extensively annotated by the distinguished scholar and biographer of Sojourner Truth, Margaret Washington, Truth's testimony takes on added dimensions: as a lens into the little-known world of northern slavery; as a chronicle of spiritual conversion; and as an inspiring account of a black woman striving for personal and political empowerment.

The color line, once all too solid in southern public life, still exists in the study of southern history. As distinguished historian Nell Irvin Painter notes, we often still write about the South as though people of different races occupied entirely different spheres. In truth, although blacks and whites were expected to remain in their assigned places in the southern social hierarchy throughout the nineteenth century and much of the twentieth century, their lives were thoroughly entangled. In this powerful collection of pathbreaking essays, Painter reaches across the color line to examine how race, gender, class, and individual subjectivity shaped the lives of black and white women and men in the nineteenth- and twentieth-century South. She explores such themes as interracial sex, white supremacy, and the physical and psychological violence of slavery, using insights gleaned from psychology and feminist social science as well as social, cultural, and intellectual history. The book illustrates both the breadth of Painter's interests and the originality of her intellectual contributions. This edition features refreshed essays and a new preface that sheds light on the development of Painter's thought and our continued struggles with racism in the twenty-first century.

A groundbreaking contribution to the history of the "long Civil Rights movement," Hammer and Hoe tells the story of how, during the 1930s and 40s, Communists took on Alabama's repressive, racist police state to fight for economic justice, civil and political rights, and racial equality. The Alabama Communist Party was made up of working people without a Euro-American radical political tradition: devoutly religious and semiliterate black laborers and sharecroppers, and a handful of whites, including unemployed industrial workers, housewives, youth, and renegade liberals. In this book, Robin D. G. Kelley reveals how the experiences and identities of these people from Alabama's farms, factories, mines, kitchens, and city streets shaped the Party's tactics and unique political culture. The result was a remarkably resilient movement forged in a racist world that had little tolerance for radicals. After discussing the book's origins and impact in a new preface written for this twenty-fifth-anniversary edition, Kelley reflects on what a militantly antiracist, radical movement in the heart of Dixie might teach contemporary social movements confronting rampant inequality, police violence, mass incarceration, and neoliberalism.

Computational science is an exciting new field at the intersection of the sciences, computer science, and mathematics because much scientific investigation now involves computing as well as theory and experiment. This textbook provides students with a versatile and accessible introduction to the subject. It assumes only a background in high school algebra, enables instructors to follow tailored pathways through the material, and is the only textbook of its kind designed specifically for an introductory course in the computational science and engineering curriculum. While the text itself is generic, an accompanying website offers tutorials and files in a variety of software packages. This fully updated and expanded edition features two new chapters on agent-based simulations and modeling with matrices, ten new project modules, and an additional module on diffusion. Besides increased treatment of high-performance computing and its applications, the book also includes additional quick review questions with answers, exercises, and individual and team projects. The only introductory textbook of its kind—now fully updated and expanded Features two new chapters on agent-based simulations and modeling with matrices Increased coverage of high-performance computing and its applications Includes additional modules, review questions, exercises, and projects An online instructor's manual with exercise answers, selected project solutions, and a test bank and solutions (available only to professors) An online illustration package is available to professors
