In solving this kind of problems, when both the smaller and larger integers are less than 18, always we have to take the larger integer to form inequality. Then, we have.  $x + 2 < 18$ . Subtract 2 from each side.  $x < 16$  ----- (1) Given : Sum of the integers is more than 20. Then, we have.  $x + (x + 2) > 20$ .  $x + x + 2 > 20$ .

One Variable Inequality Word Problems

Inequality Word Problems Inequalities, like equations, can be translated and used to solve problems. We use an inequality for values that aren't the same, or that can only be the same up to a certain amount. When a problem says "at least" or "no less than," this means the number given is the very smallest it'll go; it can't get any smaller.
