High Collection Nonimaging Optics covers the many developments and the wider range of applications of nonimaging optics. This book is organized into 11 chapters that emphasize the application of nonimaging optics to concentrators for solar energy. This text begins with discussions on the development of formalisms in nonimaging optics, specifically in the use of geometrical vector flux concept, which have led to entirely different concentrator designs. These topics are followed by a description of the so-called compound parabolic concentrator, the prototype of a series of nonimaging concentrators that approach very close to being ideal and having the maximum theoretical concentration ratio. The next chapters examine the concept of the flow line approach to nonimaging concentration; the geometrical optics model of nonimaging optics; and constructional tolerances and manufacturing methods for nonimaging optical components. A chapter highlights the applications of concentrator designs to solar energy concentrations. The last chapter surveys the applications of nonimaging optics to optical system design and to instrument design, with particular reference to utilization of light sources with maximum efficiency. This book will be of great benefit to nonimaging optics scientists and design engineers.

This is the only authoritative textbook on metabolic measurement of animals, ranging in mass from fruit flies to whales. It integrates a rigorous theoretical background with detailed practical guidelines for making actual measurements in the field and laboratory.

Fats in Animal Nutrition provides a useful text containing information from many diverse disciplines that discuss the nutritional utilization of lipids of domesticated animals. The book is divided into seven parts. Part I covers the chemistry and biochemistry of animal and plant fats and their nutritional importance; Part II discusses the general principles involved in the transport and absorption of fats and how this process is facilitated in ruminant and non-ruminant animals. The book also deals with the role of essential fats in the nutrition of different animals, as well as the protective functions of fat-soluble vitamins. Part IV discusses the use of fats as an energy source for animals; Part V deals with the inclusion of fats in animal feeds and their uses. The deposition of fat in different meats and the practical applications of fat utilization in animals are covered as well. The text is recommended for agriculturists, veterinarians, and zoologists who would like to know more about the importance of the inclusion of fats in animal diets.

Das Mobilitätsverhalten in unserer Gesellschaft wandelt sich und mit ihm die Anforderungen an das Kraftfahrzeug. In Zeiten von Klimawandel durch steigende Luftverschmutzung, Verknappung und Verteuerung fossiler Energien aber auch zunehmender Digitalisierung verändern sich die aktuellen Fahrzeugkonzepte und entwickeln sich weiter. Das Auto der Zukunft muss sparsam, umweltfreundlich, sicher, komfortabel, digital vernetzt und automatisiert sein. Gleichzeitig soll es das Bedürfnis nach Individualität erfüllen, den Fahrer emotional ansprechen und so den Reiz erzeugen, das Fahrzeug sein Eigen nennen zu wollen. Dies ist ein Balanceakt, der die Automobilindustrie vor sehr große Herausforderungen stellt.
