The pareto principle is the theory that 80% of a result is achieved with the first 20% of effort. For example, a student who can get an 80% score on a test with 3 hours of study but would need to study for 15 hours to get 100%. In this case, the path of least resistance is to do the 20% of work that gets you the 80% result.

12 Examples of The Path Of Least Resistance - Simplicable

In physics, the "path of least resistance" is a heuristic from folk physics that can sometimes, in very simple situations, describe approximately what happens. It is an approximation of the tendency to the least energy state. Other examples are "what goes up must come down" and "heat goes from hot to cold" (second law of

Robert Fritz's Path of Least Resistance is an empowering guide to creating a life that reflects your abilities and passions. It's not a New Age book, in that the author does not teach that everything that happens to us stems from our conscious attitudes and intentions. He presents very good evidence as to why affirmations and will power don't work.

The path of least resistance in problem solving is to move from worse to better and then from better to worse again. This is because the actions taken are generated by the problem. If the intensity of the problem is lessened by the actions one took, there is less motivation to take further actions.
