When you have to kill the same terrorist twice in one week there's either something wrong with your world or something wrong with your skills... and there's nothing wrong with Joe Ledger's skills. And that's both a good, and a bad thing. It's good because he's a Baltimore detective that has just been secretly recruited by the government to lead a new taskforce created to deal with the problems that Homeland Security can't handle. This rapid response group is called the Department of Military Sciences or the DMS for short. It's bad because his first mission is to help stop a group of terrorists from releasing a dreadful bio-weapon that can turn ordinary people into zombies. The fate of the world hangs in the balance....

The hunt for Patient Zero sends Dr. Harper Randolph to a faraway land. As she presses forward to discovering the truth, she's chased by a government trying to hide the truth. She follows the evidence to the first kill, but are all the answers there? The search for a “ patient zero ” —popularly understood to be the first person infected in an epidemic—has been key to media coverage of major infectious disease outbreaks for more than three decades. Yet the term itself did not exist before the emergence of the HIV/AIDS epidemic in the 1980s. How did this idea so swiftly come to exert such a strong grip on the scientific, media, and popular consciousness? In *Patient Zero*, Richard A. McKay interprets a wealth of archival sources and interviews to demonstrate how this seemingly new concept drew upon centuries-old ideas—and fears—about contagion and social disorder. McKay presents a carefully documented and sensitively written account of the life of Gaétan Dugas, a gay man whose skin cancer diagnosis in 1980 took on very different meanings as the HIV/AIDS epidemic developed—and who received widespread posthumous infamy when he was incorrectly identified as patient zero of the North American outbreak. McKay shows how investigators from the US Centers for Disease Control inadvertently created the term amid their early research into the emerging health crisis; how an ambitious journalist dramatically amplified the idea in his determination to reframe national debates about AIDS; and how many individuals grappled with the notion of patient zero—adopting, challenging and redirecting its powerful meanings—as they tried to make sense of and respond to the first fifteen years of an unfolding epidemic. With important insights for our interconnected age, *Patient Zero* untangles the complex process by which individuals and groups create meaning and allocate blame when faced with new disease threats. What McKay gives us here is myth-smashing revisionist history at its best.

An examination of the AIDS crisis exposes the federal government for its inaction, health authorities for their greed, and scientists for their desire for prestige in the face of the AIDS pandemic.

A new strain of avian influenza makes its debut in a small village in Vietnam. Like a ricocheting bullet, the virus affects the lives people worldwide until it is stopped by a team of epidemiologists. Myriam is a British PR executive on holiday with her husband when he becomes the first person infected in Hong Kong. Her life is completely changed by the experience, in ways she never predicted. Brian is an American scientist who invents a new antiviral medication, but fakes test data so that it can be released early. Jie is an epidemiologist at the Chinese CDC in Beijing, who will solve the puzzle of the new virus. As the unknown virus quickly spreads its way across the globe, entire societies are affected and changed by the outbreak, leaving the reader with the ultimate question: What would be important to you, what would you do, if a pandemic actually occurred?
