In this eBook, Certified NLP Trainers David Kerr and Damian Hamill take the reader through a fascinating and thoughtful introduction to the field of Neuro-linguistic Programming. Rather than merely focusing on techniques and superficial content, David and Damian empower the reader to harvest the full fruits of NLP by exploring the fundamental structure and underpinning concepts that make it the flexible and effective approach to life and work that it is. They help the reader build understanding step-by-step, embroidering the learning with enlightening examples and intriguing exercises to really integrate and bring to life the material being taught. Despite their particular focus on the use of NLP in work and business, the authors show how NLP can offer relevant and rewarding skills to every area of your life.

The impact of computer systems that can understand natural language will be tremendous. To develop this capability we need to be able to automatically and efficiently analyze large amounts of text. Manually devised rules are not sufficient to provide coverage to handle the complex structure of natural language, necessitating systems that can automatically learn from examples. To handle the flexibility of natural language, it has become standard practice to use statistical models, which assign probabilities for example to the different meanings of a word or the plausibility of grammatical constructions. This book develops a general coarse-to-fine framework for learning and inference in large statistical models for natural language processing. Coarse-to-fine approaches exploit a sequence of models which introduce complexity gradually. At the top of the sequence is a trivial model in which learning and inference are both cheap. Each subsequent model refines the previous one, until a final, full-complexity model is reached. Applications of this framework to syntactic parsing, speech recognition and machine translation are presented, demonstrating the effectiveness of the approach in terms of accuracy and speed. The book is intended for students and researchers interested in statistical approaches to Natural Language Processing. Slav's work Coarse-to-Fine Natural Language Processing represents a major advance in the area of syntactic parsing, and a great advertisement for the superiority of the machine-learning approach. Eugene Charniak (Brown University)

High performance in general, and in sport in particular, is becoming more and more competitive. Today's parents and the coaches of talented youngsters face many challenges. They know intuitively that they need to do something to help their children achieve their full potential - but what is that something? Executive coaches Tim Goodenough and Michael Cooper are highly experienced at working with people who want to develop that elusive balance between work and life, while at the same time trying to develop their potential to get the most out of both. They also work in the world of high performance sport. In Raising Talent they set out discovering, understanding and learning what the key dynamics and challenges are for developing talent, especially that of children. As their thinking became sharper and their principles better defined, several models and techniques emerged and this book explains their context and how they may apply in your home. They provide an accessible and quality self-coaching programme and a solid foundation of high performance theory for fast-tracking development. This unique system of accelerating performance means that the hard-working individual now has access to many of the mental coaching techniques and benefits that normally only a highly skilled professional would be able to provide. Although aimed at parents more than any other group, the principles and techniques in Raising Talent can be applied to the development of performance, regardless of the level of talent, at any age. In fact, these same models and principles have been successfully used to accelerate the performance of Olympians, executives, international athletes and performers in multiple sports and contexts - as well as to develop Tim's karaoke singing ...
