Weaving is defined as a Process of textile production in which two different sets of yarns or threads are interlaced or meshed with right angles and thus form a fabric or cloth. The lengthwise threads are called the warp and the widthwise threads are called weft or filling. The fabric or cloth made with this process is called woven fabrics.

Woven cloth is normally much longer in one direction than the other. The lengthwise threads are called the warp, and the other threads, which are combined with the warp and lie widthwise, are called the weft (synonyms are “ filling, ” “ woof, ” and “ shoot, ” or “ shute ” ). An individual thread from the warp, of indefinite length, is called an end; each individual length of weft, extending from one edge of the cloth to the other, is called a pick, or shot.

Different weaving techniques include the basic plain weave, the double-toned basket weave or binakul, and the multi-heddle weave (binetwagan or tinumballitan), among others. Among the complicated one is the brocade weave or pinilian, which uses sticks inserted on selected warp threads to create designs that float on the threads.

### Weaving the Threads of Filipino Heritage | Tatler Philippines

Weaving encourages creative thinking and problem solving, it strengthens fine motor skills and it ' s an early introduction to more advanced skills like sewing, knitting and crocheting. By exposing our kids to these easy, beginner fibre crafts, we increase the chances of them embracing those advanced crafts as hobbies as they get older.

Basic Principle of Weaving: In the loom the warp threads are led through eyes in metal rods known as heddles, one for each thread. Alternate heddles are joined together in a frame. There are at least two frames, together making up the harness. The purpose of the harness is to move the warp threads up and down.

The Working Principle And Type Of Loom. Nov 29, 2018. Weaving machines, also known as textile machines, weaving machines, cotton spinning machines, etc., the early looms are all driven by human-powered looms. The shuttleless looms technology has been in research since the 19th century and has gradually been introduced to the international market since the 50th generation.
