Authorities require their citizens to stay at home and avoid social contact during the pandemic. The result is an e-commerce boom, with online retail orders increasing for example in the US by 146% in comparison to the previous year. However, customers experience that many

Access Free Retail Vendor

well-known benefits, such as a seemingly endless selection of affordable products or shipping in two days, are no longer guaranteed. The reason lies in the process of order fulfillment. This process encompasses all the activities a company undertakes from the moment an

Access Free Retail Vendor

Order is received until the items are delivered, including all customer services.

It comprises back-office activities such as packaging, delivery, accounting, inventory management, and shipping as well as front-office activities such as advertising and order acceptance.

To remain competitive in today's market and economy, retail companies must provide products and services in the form, time and place that their consumers demand. The rise in e-commerce and improved logistics capabilities have changed how

Access Free Retail Vendor

products are sold.

Companies are looking to decrease costs and lead times to remain profitable as competition and consumer demands intensify. Retailers are looking to lower costs in their supply chain. Using sales data and forecasting methods, retailers are placing smaller, more

Access Free Retail Vendor

Order frequent orders to decrease inventory and associated inventory costs throughout their network. This faster replenishment model has led to small containers becoming more common in wholesale fulfillment than large containers. Though there has been a shift in order

Access Free Retail Vendor

size and frequency, there has been little change in ordering structure. Many major retailers use a centralized purchasing structure. Within the structure, there are different product categories, or departments, with buyers that place orders for the entire company. This allows

Access Free Retail Vendor

Order departmental expertise. Under this structure, employees from each buying department are placing multiple orders per week. This has a huge impact on vendors that supply products that fall into more than one retail category. Different orders cannot be combined so vendors

could potentially receive multiple orders from the same customers that originated from different buying departments. A case study on buying strategy and structure demonstrates that a change from current retailer ordering structure with multiple buying

Access Free Retail Vendor

departments to a single source of orders can decrease vendor corrugate and labor costs by 16%.

This change allows the vendor to deliver the same products while using less labor and packaging materials. A company ' s supply chain can be a competitive
