This volume presents a comprehensive collection of state-of-the-art advances in the field of solid state ionic materials and the design, fabrication and performance of devices that use them, such as lithium batteries, gas sensors, fuel cells, supercapacitors and electrochromic displays.

This complicated many-particle problem

constitutes an area of

basic research in its own right. At SFB 458, it has

been tackled on

complementary routes,

i.e., by synthesis of new

disordered electrolytes,

by advanced

experimental techniques

and by numerical
