Structure Of Materials An Introduction

Begins by reviewing general chemical principles that aid in the description of material structure. Such topics as periodic structure, types of bonding, and potential energy diagrams are reviewed. This information is used to look at the structure of specific materials categories in more detail: metals, ceramics, polymers, composites and biological materials (biologics).

Structure of Materials: An Introduction to Crystallography ...

This section will begin with an introduction to the four common types of engineering materials. The structure of materials at the atomic level will then be considered, along with some atomic level features that give materials their characteristic properties. Some of the properties that are important for the structural performance of a material and methods for modifying these properties will also be covered.
