I retain a lot of what I read (like the Brain Audit) and while I conduct workshops, I can't do them until I have learned the material, which by definition, means I've retained it. I don't disagree with the concept — along the lines of "see one, do one, teach one" which refers to medical training, I think.

How To Retain 90% Of Everything You Learn

Reading comes easily to some students, but many struggle with some part of this complex process that requires many areas of the brain to operate together through an intricate network of neurons. As a classroom teacher who has also worked as a neurologist, Judy Willis offers a unique perspective on how to help students not only learn the mechanics of reading and comprehension, but also develop a love of reading.

Teaching the Brain to Read: Strategies for Improving ...

Because right-brain oriented kids are visually oriented and see things holistically rather than in parts, utilize phonics programs that incorporate visual images to teach reading. When teaching sight words, write the name of the word either on top of a picture of the word, or incorporate the written text of the word as a picture.

Right-Brained Reading Strategies | TheHomeSchoolMom

This book will inform professionals and parents alike, and will challenge many academics with its strongly put case for a balanced approach to teaching reading.
