Overfishing is an issue that extends beyond familiar species like bluefin tuna and orange roughy. It's also a serious issue with sharks. Sharks are killed in the tens of millions each year, mainly...

The Ocean Has Issues: 7 Biggest Problems Facing Our Seas ...

10) Ocean Warming. The oceans are rising and getting warmer faster than predicted. 71% of our planet is covered by oceans, yet we still neglect them, harming the innumerable creatures that live in them, and polluting one of our largest resources. In the fight for the environment, the health of our oceans should be a top priority.

Top 11 Issues..... Affecting Oceans

HANCE D. SMITH 1. Introduction The millennium has been widely regarded as a time to take stock among other things, of the planet and its relationships with the people who inhabit it. Why this should b

The Oceans: Key Issues in Marine Affairs | SpringerLink

Global warming is causing alterations in ocean chemistry and many oceanic processes, and it is threatening many species of marine animals that cannot cope with higher temperatures. Overfishing is a...

Oceans and the Threats They Face | National Geographic

Issues in this realm include chemical dumping, petroleum spills, toxics leaching from plastics, mercury getting into the air from coal-burning and then into marine systems and seafood (mercury also...

Threats to the oceans and what we should do about them ...

Overfishing is threatening food security for hundreds of millions of people and destroying ocean ecosystems worldwide. We've already removed at least two-thirds of the large fish in the ocean, and one in three fish populations have collapsed since 1950. Put simply, there are too many boats chasing too few fish. Human Rights on Land & at Sea

Oceans Issues & Threats - Greenpeace USA

Our Ocean is in trouble. Despite giving us life, we don't treat it with the care and respect that it deserves. The impact of climate change is being felt in all corners and all depths of the Ocean, from the Antarctic to the Arctic. We are choking it with plastic from our throw-away society and irresponsible fishing activities are emptying its waters and threatening key Ocean species such as sharks and rays.

Key Issues - Ocean Unite

The oceans are losing mussel mass. One effect of greenhouse emissions is increased ocean acidification, which makes it more difficult for bivalves such as mussels, clams and oysters to form shells, decreasing their likelihood of survival, upsetting the food chain and impacting the multibillion-dollar shellfish industry.

Ocean pollution - 11 facts you need to know

The oceans had long been subject to the freedom of-the-seas doctrine - a principle put forth in the 17th century, essentially limiting national rights and jurisdiction over the oceans to a narrow...

### Oceans and the Law of the Sea | United Nations

Oceans absorb most of the planet's excess heat. Sea temperatures are rising, melting Arctic ice, impacting coral reefs and leading to some species to migrate. The extra carbon makes seawater more acidic.

Katsiaryna Pabortsava, of the UK's National Oceanography Centre, and lead author of the study, said: "Our key finding is that there is an awful lot of very, very small microplastic particles in the...

### Plastic pollution in Atlantic at least 10 times worse than ...

More than eight million tonnes of plastic enters the world's oceans each year and most of that escapes from land. It can be blown into the sea from ships and beaches, or carried there by river....

### What is the problem with plastic? - CBBC Newsround

The problem of plastic in nature, particularly in our oceans, is a global crisis. Every minute, about a dump-truck load of plastic goes into the oceans, sullyng beaches, hurting wildlife, and contaminating our food supply.

### Plastic in the ocean | Magazine Articles | WWF

Ocean acidification is currently affecting the entire ocean, including coastal estuaries and waterways. Billions of people worldwide rely on food from the ocean as their primary source of protein. Many jobs and economies in the U.S. and around the world depend on the fish and shellfish that live in the ocean.

### Ocean acidification | National Oceanic and Atmospheric ...

Ocean fertilization, which some scientists refer to as bio-geoengineering, would involve dissolving iron or nitrates into the surface waters of specific ocean regions to promote the growth of phytoplankton where primary productivity is low. For the scheme to be effective, it is thought that a sustained effort would be required from a fleet of vessels covering most of the ocean.

### Ocean fertilization | geoengineering | Britannica

Some key facts: Half of all plastics ever manufactured have been made in the last 15 years. Production increased exponentially, from 2.3 million tons in 1950 to 448 million tons by 2015.
