Over the last few years,
the scope of
telecommunication
services has increased
dramatically making
network infrastructure-
related services a very
competitive market.

Read PDF The Performance

Additionally, the traditional telecoms are now using Internet technology to provide a larger range of services. The obvious outcome is the increase in the number of subscribers and services demanded. Due to this complexity, the performance testing of continuously evolving telecommunication

Read PDF The Performance Test Method

services has become a real challenge. More efficient and more powerful testing solutions are needed. This ability depends highly on the workload design and on the efficient use of hardware resources for test execution. The performance testing of telecommunication services raises an

Read PDF The Performance Test Method

interesting problem: how to create adequate workloads to test the performance of such systems. Traditional workload characterization methods, based on requests/second, are not appropriate since they do not use proper models for traffic composition. In these environments, users

Read PDF The Performance

interact with the network through consecutive requests, called transactions.

Several transactions create a dialog. A user may demand in parallel two or more services and different behavioural patterns can be observed for different groups of users. This thesis proposes a performance testing
