Transcription and translation (practice) | Khan Academy

Transcription is the process in which DNA is used as a template to produce a single-stranded RNA molecule.

Translation is the process in which the DNA code, now contained in the single-stranded RNA, is deciphered into a sequence of linked amino acids that become a protein.

Flow of Genetic Information Kit Transcription Activity ...

After you've worked with your students on the steps of transcription and translation they can practice all the steps in one chart. The worksheet walks them through 4 strands of DNA that have been changed to represent a mis-sense, frameshift, and silent mutation. Answer key included.

Transcription And Translation Worksheet | Teachers Pay ...

Transcription takes place in the nucleus while translation takes place on the ribosomes in the cytoplasm. Eukaryotic cells have introns that must be removed from the pre-mRNA before translation can occur.

Study Gene Expression- Translation POGIL Flashcards | Quizlet

As discussed in the introduction, transcription is followed by translation. During translation, the sequence of nucleotides in mRNA determines the sequence of amino acids in a protein. (Figure 14.5 from Krogh, Biology, a Guide to the Natural World, 2005)
