The class A load for each triode = RLa = (Ea / Ia) - (2 x Ra) = (420V / 0.07A) - (2 x 1,000) = 6,000r - 2,000r = 4k0. The 1k0 for triode Ra is approximately correct for 6550 in triode mode. Each 6550 theoretically produces class A Po10 = 0.5 x Iadc squared x RLa = 0.5 x 0.07A x 0.07V x 4,000r = 9.8W.

into account the book. triode push pull circuit datasheet application note truly offers what everybody wants. The choices of the words, dictions, and how the author conveys the declaration and lesson to the readers are unquestionably easy to understand. So, as soon as you tone bad, you may not think thus hard very nearly this book.

The following topology is well known. The push-pull output stage has local feedback (a.k.a. "A la Schade") between anode and grid. Obviously the drivers are pentodes. Subtle difference is that I added a source follower in between grids to provide negative bias and grid current drive. The drivers are based out of the beloved 6J49P-DR.

However, if we look at a push-pull amplifier with the 45, we can hopefully retain the timbre characteristic of the valve, despite it won't be a single-ended one. Well, I love good PP amps, so why not? If you read carefully the datasheet, you will find that you can extract a lot of power from this valve in A2 operation. Precisely, AB2 in PP mode.

45 Push-Pull Amplifier - Bartola® Valves

The alternative choice is to employ two separate pentodes having the requisite HT current consumption in the push-pull output stage, these being preceded by a double-triode voltage amplifier and phase-splitter. This choice was adopted, and the valves finally chosen by the writer were an ECC82 for the double-triode and two EL91s for the output stage. In the circuit employed here, the latter would offer some 4 Watts of audio power, which should be quite adequate for record player requirements.

Small Push-Pull Amplifier

The EL34 data sheet shows that a pentode connection with lower plate voltage than a triode connection produces more power (3w more if I remember). Most amps I have built have their power tubes screen grid at the same potential as the plate, and then are being considered as triodes.

The 6DJ8 tube headphone amplifier is suitable for use with many Hi-Fi headphones. Output power is over 100 mW between 32 ohms to 300 ohms. The response is 20 Hz to 28 kHz within 0.5 dB and

It is 100 years ago this year that the triode was invented by Lee de Forest.It is remarkable that triode output stages still occupy an important place in high-end audio amplifiers. Triode amplifiers are often very expensive. The design presented here is based on a combination of optimal quality and reasonable construction cost.

Class-A Triode Push-Pull Amplifier | Elektor Magazine

To create a push pull amplifier is possible to use triode and pentode but obviously to test many configurations like the ultra linear we need a pentode. There are many pentode good for audio amplifiers but the most common in the current production are the EL34, 6550 and the KT88 so follows a compare table with the main characteristics and price.

Triode Push Pull Circuit Datasheet Application Note

Any valve textbook describing how to design a push-pull stage will explain how to draw 'composite characteristics'. These are simply the combined anode characteristics of the stage, as if the two valves in the circuit are rolled into one big valve (which as far as the output transformer is concerned, they are).

The Valve Wizard -Push-Pull

When using the 6BX7 or 6BL7 in a push-pull circuit, distortion is caused by the differences between the triodes in each bottle, and it shows up as A-symmetry on the oscilloscope when the differential output signal is probed.

A triode is an electronic amplifying vacuum tube (or valve in British English) consisting of three electrodes inside an evacuated glass envelope: a heated filament or cathode, a grid, and a plate ().Developed from Lee De Forest's 1906 Audion, a partial vacuum tube that added a grid electrode to the thermionic diode (Fleming valve), the triode was the first practical electronic amplifier and ...
