Type 2 diabetes - Symptoms - NHS

Type 2 diabetes is different. If you've got type 2, either your body doesn't make enough insulin, or your insulin doesn't work properly. This is known as insulin resistance. Like type 1, this means the level of glucose in your blood is too high.

Differences between type 1 and type 2 diabetes | Diabetes UK

If you've just been diagnosed with type 2 diabetes, one of the first things you might be worried about is food. You're likely to be faced with what seems like an endless list of new tasks. Medical appointments, taking medication, stopping smoking, being more active and eating a healthy, balanced diet - it can all seem so daunting and overwhelming.

I have type 2 diabetes - what can I eat? | Diabetes UK

There is evidence that eating a low-calorie diet (800 to 1,200 calories a day) on a short-term basis (around 12 weeks) can help with symptoms of type 2 diabetes. And some people have found that their symptoms go into remission. A low-calorie diet is not safe or suitable for everyone with type 2 diabetes, such as people who need to take insulin.

Type 2 diabetes - Food and keeping active - NHS

The autoimmune systems of people with type 2 diabetes don't attack beta cells. Instead, type 2 diabetes is characterised by the body losing its ability to respond to insulin. This is known as insulin resistance. The body compensates for the ineffectiveness of its insulin by producing more, but it can't always produce enough.

Differences Between Type 1 and Type 2 Diabetes

If you have type 2 diabetes, your body stops reacting to insulin properly, and you may not produce enough. There are two main types of diabetes: type 1 and type 2. Type 2 diabetes is the most common. About 3.5 million people in the UK are diagnosed with diabetes, and of these, more than nine out of 10 have type 2 diabetes.

Type 2 diabetes | Health Information | Bupa UK

Type 2 diabetes is two to four times more likely in people of South Asian descent and African-Caribbean or Black African descent. You're more at risk if you've ever had high blood pressure. You're more at risk of type 2 diabetes if you're carrying extra weight, especially if this weight is around your middle.
