The upper GI tract consists of the oesophagus (the gullet or food pipe), the stomach and the duodenum (the first part of the small intestine). To carry out this procedure, your specialist will use a thin, flexible tube called an endoscope, which has a tiny camera, with its own lens and light source. They will view the images on a video monitor.

Gastrointestinal problems in hypermobile Ehlers-Danlos ...

For esophageal cancer, surgery may remove some or most of the esophagus through an esophagectomy. Sometimes the cancer has spread to the upper part of the stomach, and that must be removed as well. There are new minimally invasive forms of esophagectomy surgery now being performed.

Stomach and Esophageal Cancers — Green Bay Oncology

Subtotal gastrectomy, removal of part of the stomach, is used for cancer located in the upper part of the stomach. If the cancer has spread throughout the stomach, a total gastrectomy will remove the stomach and rework the digestive tract. For esophageal cancer, surgery may remove some or most of the esophagus through an esophagectomy.
