A leading Iranian scholar provides a political and cultural history of Iran over the last two centuries, offering an insightful analysis key recent events, cultural trends, and political developments, in a revealing look at a country marked by a determination to build a nuclear arsenal, vast oil reserves, rigid theocracy, and anti-Israeli and anti-American stance.

Iran has one of the world's highest rates of drug addiction: estimated to be between 2 and 7 percent of the entire population. This makes the questions that this book asks all the more salient: what is the place of illegal substances in the politics of modern Iran? How have drugs affected the formation of the Iranian state and its power dynamics? And how have governmental attempts at controlling and regulating illicit drugs affected drug consumption and addiction? By answering these questions, Mazyar Ghiabi suggests that the Islamic Republic of Iran's image as an inherently conservative state is not only misplaced and inaccurate, but in part a myth. In order to dispel this myth, he skilfully combines ethnographic narratives from drug users, vivid field observations from 'under the bridge', with archival material from the pre- and post-revolutionary era, statistics on drug arrests and interviews with public officials. This title is also available as Open Access on Cambridge Core.

Among Asian languages, Tibetan is second only to Chinese in the depth of its historical record, with texts dating back as far as the eighth and ninth centuries, written in an alphabetic script that preserves the contemporaneous phonological features of the language. The *Classical Tibetan Language* is the first comprehensive description of the Tibetan language and is distinctive in that it treats the classical Tibetan language on its own terms rather than by means of descriptive categories appropriate to other languages, as has traditionally been the case. Beyer presents the language as a medium of literary expression with great range, power, subtlety, and humor, not as an abstract object. He also deals comprehensively with a wide variety of linguistic phenomena as they are actually encountered in the classical texts, with numerous examples of idioms, common locutions, translation devices, neologisms, and dialectal variations.

The present book addresses various power system planning issues for professionals as well as senior level and postgraduate students. Its emphasis is on long-term issues, although much of the ideas may be used for short and mid-term cases, with some modifications. Back-up materials are provided in twelve appendices of the book. The readers can use the numerous examples presented within the chapters and problems at the end of the chapters, to make sure that the materials are adequately followed up. Based on what Matlab provides as a powerful package for students and professional, some of the examples and the problems are solved in using M-files especially developed and attached for this purpose. This adds a unique feature to the book for in-depth understanding of the materials, sometimes, difficult to apprehend mathematically. Chapter 1 provides an introduction to Power System Planning (PSP) issues and basic principles. As most of PSP problems are modeled as optimization problems, optimization techniques are covered in some details in Chapter 2. Moreover, PSP decision makings are based on both technical and economic considerations, so economic principles are briefly reviewed in Chapter 3. As a basic requirement of PSP studies, the load has to be known. Therefore, load forecasting is presented in Chapter 4. Single bus Generation Expansion Planning (GEP) problem is described in Chapter 5. This study is performed using WASP-IV, developed by International Atomic Energy Agency. The study ignores the grid structure. A Multi-bus GEP problem is discussed in Chapter 6 in which the transmission effects are, somehow, accounted for. The results of single bus GEP is used as an input to this problem. SEP problem is fully presented in Chapter 7. Chapter 8 devotes to Network Expansion Planning (NEP) problem, in which the network is planned. The results of NEP, somehow, fixes the network structure. Some practical considerations and improvements such as multi-voltage cases are discussed in Chapter 9. As NEP study is typically based on some simplifying assumptions and Direct Current Load Flow (DCLF) analysis, detailed Reactive Power Planning (RPP) study is finally presented in Chapter 10, to guarantee acceptable ACLF performance during normal as well as contingency conditions. This, somehow, concludes the basic PSP problem. The changing environments due to power system restructuring dictate some uncertainties on PSP issues. It is shown in Chapter 11 that how these uncertainties can be accounted for. Although is intended to be a text book, PSP is a research oriented topic, too. That is why Chapter 12 is devoted to research trends in PSP. The chapters conclude with a comprehensive example in Chapter 13, showing the step-by-step solution of a practical case.

Transgender studies is the latest area of academic inquiry to grow out of the exciting nexus of queer theory, feminist studies, and the history of sexuality. Because transpeople challenge our most fundamental assumptions about the relationship between bodies, desire, and identity, the field is both fascinating and contentious. The *Transgender Studies Reader* puts between two covers fifty influential texts with new introductions by the editors that, taken together, document the evolution of transgender studies in the English-speaking world. By bringing together the voices and experience of transgender individuals, doctors, psychologists and academically-based theorists, this volume will be a foundational text for the transgender community, transgender studies, and related queer theory.
